BASIC DIGITAL PHOTO PAPER

The better quality the paper is, the better the print will look!

There is a big difference in ink distribution across the color range

Better paper produces greater clarity and tonal depth.

RC paper is okay for this class, but Archival Fiber-based paper is the professional choice

The thickness of the paper is also a consideration, thicker being better.

Buy Pearl/ Luster/ Satin/ Semi-Gloss, Matte surface or Baryta. NO GLOSSY!

at least 100 sheets will be used throughout the semester

do not buy it all at once

allow yourself to try several brands, or share with a classmate

Don't buy any paper that does not say 'Compatible with Pigment Ink'

Don't ever buy Kodak, HP, Konica or especially Staples paper.

They are not compatible with our printers. Canon ink will not stick to them.

note: Ilford and Harmon are the same company

Inkpress and Projet are the same company

Some vendors give lower prices if you add the paper into the Shopping Cart.

B&H has some of the papers below at reduced price. Check it out.
