

BORROWING WEB PAGES and WEB PICTURES

Any HTML web page can be borrowed from the web by saving it as a source file to your disk. All browsers support this feature. Saving the page only saves the HTML code, however. The pictures and graphics on a page are separate files and have to be saved individually. Notice that if you save a web page with flash animation embedded you will not get the animation file, nor can these be saved (which makes turning all pictures into flash graphics a reasonable security measure).

SAVING WEB PAGES

open any browser on any computer on any operating system
html is generic and completely cross platform
navigate to the desired page
save the page using FILE> SAVE AS...
navigate to a folder on *your* Zip disk
set the file type to source, not text, in pull_down menu
save the file

SAVING WEB PICTURES

click and hold on any picture or graphic
a menu should open with a list of options
scroll down to 'save this image as...'
release the mouse
a SAVE FILE dialog box should open
navigate to a folder on *your* Zip disk
save the picture
